

August 2010

Creek's Destiny range has been upgraded.

A new integrated amplifier and CD Player are now available, both exhibiting noticeable sonic improvements over the original Destiny models.

The most noticeable cosmetic change is a move away from green display and LED's to blue so that Destiny products can now be easily matched with Evolution should a customer wish to mix and match!

A new Creek remote handset has been designed to be released at the same time – the SRC3. This remote will in fact operate all Creek products, past and present.

Detailed information about the Destiny 2 integrated amplifier and Destiny 2 CD Player can be found in the Products section
